

[GETNET] MOVE DE OBJETOS GNCASNPA01040 E GNCASNPL08426

Nota: Esse foi um procedimento realizado nos servidores GNCASNPA01040 e na antiga GNCASSPL01262 a qual foi migrada para GNCASNPL08426.

Com tablespaces chegando ao limite de 1023 datafiles, foi necessário mover objetos nos bancos do Extrato Portal e BI.

EXTRATO PORTAL GNCASNPA01040

Mover de indexes: Na primeira ação de mover o Paulo criou o tablespace REP_INDEX e moveu os objetos do REP_DATA pra este novo tablespace. Note que restaram apenas 4 indexes, totalizando 18gb:

```
SQL> lhostname
gncasnpa01040
SQL> set pages 1000
SQL> select TABLESPACE_NAME from dba_tablespaces;
TABLESPACE_NAME
-----
SYSTEM
SYSAUX
UNDOTBS1
TEMP
USERS
TS_GG_DATA
BHIST_GG_DATA
TS_GOLDENGATE_DATA
BHIST_DATA
BHIST_INDEX
BHIST_IDX
APP_GETNET_DATA
PREPAGO_REP_DATA
PREPAGO_REP_INDEX
REP_DATA
BHIST_PNR_DATA
REP_INDEX
17 rows selected.
set lines 200
col owner format a20
col SEGMENT_NAME format a30
select
*
from (
select
owner,
segment_name,
bytes/1024/1024 meg
from
dba_segments
where
segment_type = 'INDEX PARTITION'
and TABLESPACE_NAME= 'REP_DATA'
order by
bytes/1024/1024 desc)
where
rownum <= 10;
OWNER SEGMENT_NAME MEG
-----
PROD_MONADQ_REP_PK_PTLF_DIMP 10991
PROD_MONADQ_REP_IDX_TRAN_DAT_01 4504
PROD_MONADQ_REP_PK_PTLF_DIMP 3944
PROD_MONADQ_REP_IDX_TRAN_DAT_01 1667
```

Scripts de Spool para serem rodados durante o move dos indexes:

```
set linesize 200;
spool_alcides_index_particionado.sql
select
'alter index '||owner||'.'||segment_name||' rebuild partition '||partition_name||' tablespace REP_INDEX PARALLEL 24;'
from dba_segments where tablespace_name='REP_DATA' and segment_type like '%INDEX%';
spool off;

spool_alcides_index.sql
select 'ALTER INDEX ' || OWNER || '.' || index_name || ' rebuild tablespace REP_INDEX online;' from dba_indexes where tablespace_name='REP_DATA';
spool off;

spool_alcides_sub_partition.sql
set linesize 200
select 'alter index '||owner||'.'||segment_name||
' rebuild subpartition '||partition_name||' tablespace REP_INDEX online;'
from dba_segments where tablespace_name='REP_DATA' and segment_type='INDEX SUBPARTITION';
spool off;
```

Sendo insuficiente mover apenas indexes, foi necessário validar o tamanho da tabela no tablespace REP_DATA e criar o REP_DATA2:

```
SQL> SET PAGES 1000
SQL> select
owner,
segment_name,
bytes/1024/1024 meg
from
dba_segments
where
segment_type = 'TABLE PARTITION'
and TABLESPACE_NAME= 'REP_DATA'
order by
bytes/1024/1024 desc  2 3 4 5 6 7 8   9 10 11 ;
OWNER SEGMENT_NAME MEG

Sendo assim, vamos fazer o move para o tablespace REP_DATA2 das partições mais antigas afim de liberar espaço no tablespace REP_DATA para as partições mais novas:

```
spool_alcides_tables.sql
select 'ALTER TABLE '||TABLE_OWNER ||'. '||table_name||' MOVE PARTITION '||partition_name||' TABLESPACE REP_DATA2 PARALLEL 24;' from dba_tab_partitions where TABLESPACE_NAME = 'REP_DATA';
```

Escolheremos apenas as 10 mais antigas:

```
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16341 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16342 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16412 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16523 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16628 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16743 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P17040 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P17175 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P17495 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P17827 TABLESPACE REP_DATA2 PARALLEL 24;
```

Criei o tablespace da seguinte forma:

```
SQL> create tablespace REP_DATA2
datafile '+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m,
'+DATA_REP' size 1G autoextend on next 1g maxsize 32000m
segment space management auto
online;
```

E adicionei 32 datafiles:

```
alter tablespace REP_DATA2 add datafile '+DATA_REP' size 100M autoextend on next 1G maxsize 32000M;
```

Disparei o move propriamente dito em nohup:

```
bash-4.3$ cat move_part1.sql
```

```

conn sys/pgoldstandard2015 as sysdba
set echo on
set timing on
set time on
spool move_part1.log
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16342 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16412 TABLESPACE REP_DATA2 PARALLEL 24;
ALTER TABLE PROD_MONADQ_REP.TRAN_PTLF MOVE PARTITION SYS_P16341 TABLESPACE REP_DATA2 PARALLEL 24;
spool off
exit;
bash-4.3$ nohup sqlplus /nolog @move_part1.sql > move01.sql.log &

```

NOTA IMPORTANTE: A taxa de escrita do host é muito grande, é necessário acompanhar, de perto, os archives gerados e a replicação do data guard.

Rebuild dos indexes:

Havia programado de fazer o rebuild das partições mais atuais (que ainda estão no tablespace DATA_REP) conforme script abaixo, porém, o objeto estava em uso e desisti.

```

spool_alcides_rebuild_index.sql
select 'alter index '|| owner || '.' || index_name || ' rebuild ;'
from dba_indexes
where table_owner = 'PROD_MONADQ_REP'
and table_name = 'TRAN_PTLF'
and index_type != 'LOB'
order by owner, index_name;
spool off;
'ALTERINDEX'||OWNER||'.'||INDEX_NAME||'REBUILD;'

```

```

alter index BHIST_OWNER.PTLF_ESTORNO_IX rebuild ;
alter index BHIST_OWNER.TRAN_PTLF_DT_UPDATE_IX rebuild ;
alter index PROD_MONADQ_REP.IDX_TRAN_DAT_01 rebuild ;
alter index PROD_MONADQ_REP.PK_PTLF_DIMP rebuild ;

```

Fiz apenas o rebuild referente as partições que eu havia movido e encerrei a atividade:

```

ALTER INDEX PROD_MONADQ_REP.IDX_TRAN_DAT_01 REBUILD PARTITION SYS_P16341;
ALTER INDEX PROD_MONADQ_REP.IDX_TRAN_DAT_01 REBUILD PARTITION SYS_P16342;
ALTER INDEX PROD_MONADQ_REP.IDX_TRAN_DAT_01 REBUILD PARTITION SYS_P16412;
ALTER INDEX PROD_MONADQ_REP.PK_PTLF_DIMP REBUILD PARTITION SYS_P16341;
ALTER INDEX PROD_MONADQ_REP.PK_PTLF_DIMP REBUILD PARTITION SYS_P16342;
ALTER INDEX PROD_MONADQ_REP.PK_PTLF_DIMP REBUILD PARTITION SYS_P16412;

```

MOVE DO BI – GNCASSPL01262

BI ainda possui muitos indexes na BI_DATA, fizemos apenas o rebuild dos indexes para o tablespace novo separando em diversos arquivos que foram disparados um a um em nohoup. Primeiro validei o novo Tablespace do BI_INDEX criado pelo paulo e atribui mais datafiles para suportar a atividade:

```

SQL> set pages 1000
set lines 300
col FILE_NAME format a78
select FILE_NAME, BYTES/1024/1024, STATUS, AUTOEXTENSIBLE, MAXBYTES/1024/1024 from DBA_DATA_FILES
where tablespace_name = 'BI_INDEX';SQL> SQL> SQL> 2
FILE_NAME BYTES/1024/1024 STATUS AUT MAXBYTES/1024/1024

```

```

25 rows selected.

```

Adicionei 15 datafiles:

```

alter tablespace BI_INDEX add datafile '+DATA' size 100M autoextend on next 1G maxsize 32000M;

```

Listagem dos indexes:

Selecionei os seguintes indexes:

```

select 'ALTER INDEX ' || OWNER || '.' || index_name || ' rebuild tablespace BI_INDEX online PARALLEL 16;' from dba_indexes where tablespace_name='BI_DATA';

```

Dos scripts que gerei disparei o 7 8 e 9 porém o 9 não foi até o fim visto o horário

... scripts que gerem, separados, e o seu desempenho não varia com o modo de instalação.

```
